

WEST 35TH
STREET HOTEL
西35街的酒店

319 WEST 35TH STREET

The structural facade of this 6,000 m² hotel is conceived as rigid tube pierced to allow for panoramic views.

The facade is conceived as a structural gradient stretched over the building vertically, creating varying degrees of transparency. The goal of this strategy is two-fold: it introduces different degrees of public access and privacy in the rooms, and it frees up the plan by eliminating internal shear walls.

319 WEST 35TH STREET

這間6000平方米的酒店的結構立面被設計由可穿透的規則的管子組成·景觀被最大化的利用·
立面作為建築結構的一部分·在建築物上垂直延伸·創造不同程度的透明性·這個設計可帶來兩種不同作用：它在房間中引入不同程度的公共性和私密性·並且通過消除內部剪力牆來釋放平面·
